Dean's Message

In 2019, Saga University School of Medicine entered a new era with its 40th anniversary in last year.

The principle of Saga University School of Medicine, is to promote education, research and medical care as an integral mission based on basic principle of “Training of good medical professionals”.

The Institute of Medicine is responsible for the training of human resources with the proper and necessary qualities as a doctor.

In addition, Saga Prefecture has geographical advantage of close to Asia, I will make changes in medical education in order to correspond international medical centered on Asia, and foster ideal doctors with wide field of view.

By the end of this year, we plan to receive a medical education evaluation by JACME, and we have made major medical curriculum changes and set up an education policy that will further improve our clinical ability.

In the institute of nursing, our aim is that students get a wide range of culture and communication skills, learning nursing science and medical expertise and technology, and we teach students to acquire problem-solving skills and nursing practice ability.

Basic research is essential to medical progress. Research of regenerative medicine and the anti-cancer drug such as antibody are gifts of the basic research.

I want students to find the importance and enjoyment of basic research, and plan to increase the students aiming graduate school.

Research and medical school education has a deep cooperation with the clinical activities at the University Hospital.

Recently, a big change is beginning such as New Japanese Medical Specialty Board and Doctor's Work Style Reform in clinic.

I want to produce the environmental improvement, which can contribute to medical development, in cooperation with each other beyond the boundaries of basic research and clinical medicine.

For the development of Saga University School of Medicine, we should make efforts together for common principles.
